Enlivening Neighborhoods

GUILFORD GOING GREEN

Global attention to Climate Change raises a new level of concern; yet, leave citizens largely at a loss regarding specific ways to address the crisis. This project moves past the individual to the neighborhood as the next unit of change. Furthermore, it will engage the City of Greensboro's long-range plan to become the "greenest city in the Southeast by 2040."

Updated: January 19, 2020

Emerging Ecology promotes individual and collective actions that evoke a mutually enhancing relationship between people and the planet. In this context, the Guilford Going Green five-part program will guide six neighborhoods through a process of discovery, design, and an attainment of resources to enliven the relationship between neighborhood and nature.

If your neighborhood possesses a sense of Community Self and yearns for both local and global change, please enroll in [Guilford Going Green Through Enlivening Neighborhoods](#). Contact Nelson Stover at NStover@EmergingEcology.org for details or visit <https://emergingecology.org/neighborhoods/> or scan the QR code at the right.
