

Emerging Ecology
Invites You to Participate in
Enlivening Neighborhoods
Guilford Going Green

Global attention to Climate Change has raised a new level of concern yet left many citizens largely at a loss regarding specific ways to address the crisis. Emerging Ecology’s Enlivening Neighborhoods project moves beyond the individual to the neighborhood as a unit for change. Furthermore, the project’s success will support the City of Greensboro’s long-range plan to become the “greenest city in the Southeast by 2040.”

Emerging Ecology promotes individual and collective actions that evoke a mutually enhancing relationship between people and Planet. In this context, the Enlivening Neighborhoods five-part launch events will guide each of six neighborhoods through a process of discovery, design, and attainment of resources to enrich the relationship between neighborhood and nature.

If your neighborhood possesses a sense of Community Self and yearns for both local and global change, please enroll in Guilford Going Green Through Enlivening Neighborhoods. Contact Nelson Stover at NStover@EmergingEcology.org for details or sign up on our website at <https://emergingecology.org/neighborhoods/> or scan the QR code at the right.
