

Sacred Geometry 101

Introducing the Language of the Universe

Saturday, November 13, 2021
10:00 – 12:30

Stovers' Sèjour
5911 Western Trail
Greensboro, NC 27410

Registration Fee: \$20.00

Sacred Geometry draws on ancient African wisdom that predates Euclid's codification that was utilized by the Greek, Muslim and later European scholars. Using simply a compass and straightedge, geometers construct shapes and patterns that mimic forms of the natural world. During the initial session, participants will draw two pictures including a 5-pointed star. Contextual information will help open doorways for further individual exploration after the session.

Participants in Sacred Geometry 101 do not need to have any special mastery of the geometric principles taught in most educational institutions. Carefully guided instructions will allow them to create detailed drawings and understand how to repeat the process. By reflecting on their work, participants will begin to understand how these diagrams mirror the patterns and processes that permeate relationships throughout the Universe.

Mr. Stover has conducted similar programs in village schools in India and for students of all ages in cities across the US. The methods used in this approach are based on the principles developed by Robert L. Powell, Sr. who taught and worked extensively in this arena.

No formal academic credentials
are required to participate
in this contextual training program of Emerging Ecology.
