

## Color a Circle, Make a Friend

For several years, Emerging Ecology has had a booth at the Earth Day Festival at the Kathleen Clay Edwards Family Library. As the event focuses heavily on Earth-friendly activities for children, the booth invites children to color in a circle or part of a drawing made using the principles of Sacred Geometry (photos this page). Display materials and conversations help convey how the natural world unfolds from basic geometric forms.

During the April day in 2013, a young girl walked up to the display poster and pointed at the Sri Yantra drawing near the center (poster in photo below). “I’ve seen that picture before,” she affirmed. Knowing that most people have neither seen the picture nor know much about it, I inquired, “Oh, where.” “In a movie,” was her quick reply. She knew that the Sri Yantra had played a pivotal role in the story line

of the movie *The Last Mimzy*. Both the girl and her mother expressed interest in knowing more about Sacred Geometry and were invited to the forthcoming program.

She and her parents came to the Sacred Geometry 101 class offered in June (right side of group photo below). The two-hour Sacred Geometry boot camp provided exercises for the participants to learn the five basic operations of constructing figures using only a compass and a straightedge. Each person then followed the instructor’s lead in drawing a five-pointed star.

After the day, her mother emailed that: “I REALLY enjoyed myself. My daughter and her father were equally pleased with the workshop. Darryl expressed his interest and even wished that he knew more about math because he was not

aware of just how connected the universe is with basic mathematical principles.”
